Diplomate, American Board of Radiology
and American Board of Medical Physics
National Medical Physics and Dosimetry
481 West Audubon Drive, Ste. 114
Fresno, CA 93711

Fresno, 4-14-2004

To whom it may concern:

In my function as a Consulting Radiation Oncology Physicist, I have known Mr. Jim Weller for the past twelve years. I have worked with Mr. Weller on a large number of Radiation Oncology Facility Development and modifications projects for which he provided either the construction of the Radiation Therapy Treatment vault or the entire Radiation Oncology Department.

Mr. Weller is a very knowledgeable and detail-oriented contractor who is always acting in the best interest of his clients. He fully understands and implements the objective to provide a Radiation Oncology environment in which Radiation Safety for the public, operating personnel, and the patient is observed while being fiscally responsible. He always realizes the requirements for Radiation Shielding as specified by the Radiation Physicist with utmost accuracy. During the construction process, he maintains pro-active communications with the involved parties, i.e., architect, civil engineer, and physicist, to ensure that the finished facility meets or exceeds the requirements in a safe, time-efficient, and cost-efficient manner.

Mr. Weller displays the highest integrity in his interactions with clients, collaborators, and sub-contractors. He is honest, trustworthy, and reliable. His projects are usually completed on-budget and on-time. From a technical and functional perspective, he always fulfills and often exceeds expectations for the specifications and needs of the project.

I recommend Mr. Jim Weller without any reservation as the contractor of choice for large and small Radiation Oncology Development and Construction projects anywhere in the United States.

Most sincerely,

Dr. Georg Weidlich
Director of Radiation Oncology Physics
